

GENERAL OVERVIEW “QUICK ATTACK” VEHICLE

Today’s fire departments require a wide array of services incorporated into each initial-attack fire apparatus. The “Quick Attack” vehicle has emerged as the global solution. This vehicle combines a light rescue body with 6 compartments and maximum compartment space plus an open center rear body area for slide-in mounting of firefighting packages. The pump and roll units feature large water and foam tanks plus a variety of high pressure or high volume fire pumps.

Class A or B foam systems are available along with hose reels and pre-connected hose lines. Generators, telescopic floodlights, and light tower packages are available from 3 to 35 kW. Single and dual agent dry chemical extinguishing systems with reels are also available. Combined with roof or bumper monitors, Fire & Hazard Control (FHC) “Quick Attack” units pack a tremendous amount of fire power into a compact vehicle for industrial locations.
