

FHC designs, fabricate and assemble Chemical Injection Package for various applications. We can manufacture skids which are compatible to various hazardous classification and suitable for various corrosion Area classification. We cover different industries like Offshore, Petrochemical and Process industries.

Our main products are:

- Scale Inhibitors.
- Corrosion Inhibitors.
- Demulsifiers.
- H₂S Scavengers.
- Ethanol.
- DRA injection skid.

CHEMICAL INJECTION SKIDS

CHEMICAL INJECTION SKIDS

TECHNICAL DETAILS:

The package can be for single injection output or multi-injection outputs including multi chemical system and the pumps used are according to API 675 latest edition. They can be either diaphragm type or plunger type with manual or automatic stroke control depending on application. PLC control system is integrated with flow measurement & control to ensure the exact injection rate.

MOC for the tanks can be SS316, SA36, poly-ethylene or GRP according to the chemical to be stored or project specification. Tanks are usually mounted on a common skid with the pumps. The tank shall come with level gauges, level transmitters as part of instrumentations.
